Justification for Real World Testing Approach

170.315(b)(10) Electronic Health Information (EHI) Export

Single Patient EHI Export Justification

Since we do expect that there will be some actual real-world usage of the single patient export capabilities, tracking such real-world usage is the most authentic approach to the RWT activities. The data produced will provide valuable insights on the overall volume of use of the certified capabilities, including performance analytics indicating the ease of operation. Additionally, since the EHI Export capability is equivalent for all care setting and implementations, this will provide evidence applicable across any setting or implementation.

Patient Population EHI Export Justification

To date, IntellicureEHR has not received any requests for a patient population EHI Export. Therefore, we are pursuing a strategy involving a mock export that would closely mirror real world conditions to ensure we have an appropriately representative data set for the RWT results. This will provide direct evidence that the certified EHI Export capabilities are suitably functional if a customer were to request them and specific analytics on the performance of the operations in the real world. As with the single patient export, the patient population export is operated the same in all applicable care settings and implementations, therefore the methodology allows for results applicable to all care settings and implementations.

Standards Version Advancement Process (SVAP) Standards Updates

Standard (and version)	N/A
Updated certification criteria and associated product	N/A
Health IT Module CHPL ID	N/A
Date of ONC ACB notification	N/A
Date of customer notification	N/A
Conformance method and measurement/metric(s)	N/A

Real World Testing Methodologies

The Real-World Testing (RWT) methodology for IntellicureEHR-based Electronic Health Information (EHI) Export certified capabilities will consist of tracking live production activity utilizing the certified EHI Export capabilities. Single patient export statistics will be tracked via system-automated transaction logging at the time of the request and then the periodic retrieval of this data into a cross-database analytics tool. Patient population EHI Export statistics will be gathered by reviewing recorded requests logged for customers seeking a full patient population export and determining their successful delivery dates.

Care Settings for Real World Testing

- Ambulatory

Schedule of Key Milestones

Key Milestone	Date/Timeframe
Release of documentation for the Real-World Testing to be provided to authorized representatives and providers.	December 2024
Begin data retrieval of customer usage of single patient EHI Export	January 1, 2025
Follow-up with providers and authorized representatives on a regular basis to understand any issues arising with the data collection.	Quarterly, 2025
End of Real-World Testing period/final collection of all data for analysis.	January 1, 2026
Compile 2025 data, analysis, and report creation	End of January 2026
Submit Real World Testing report to ACB (per their instructions)	February 1, 2026

Real World Testing Expected Outcomes

The expected outcomes of the EHI Export RWT plan will consist of observing consistent successful delivery of both single patient and patient population EHI Export data. We also anticipate that the overall volumes will be relatively low given the lack of practical real-world use-cases for the export in favor of other more established and standardized methods, such as patient portals and FHIR APIs for single patient export, as well as the limited scenarios in which a full patient population export would be leveraged.

Real World Testing Metrics

1. Total number of successfully generated single patient EHI Exports during the 2025 calendar year.
2. Total number of successfully delivered patient population EHI Exports during the 2025 calendar year.

Attestation

This Real-World Testing plan is complete with all required elements, including measures that address all certification criteria and care settings. All information in this plan is up to date and fully addresses the health IT developer's Real World Testing requirements.
